Email: imanushkav221@gmail.com | [Delhi, India](#) | [Open to remote, hybrid and relocation](#)

Data Lead with 5+ years across the full data stack in energy research: pipelines and warehousing, forecasting and scenario models, LLM applications, and client-facing data products and dashboards. Most recently Data Lead at Bloomberg, where I owned the data, models and Enterprise Data API behind the New Energy Outlook. Before that I built and led data teams at Wood Mackenzie. I can own a problem end to end, from raw data to what the client uses. Available immediately.

SKILLS

- **Python**, SQL, Pandas, NumPy, ETL Pipelines, Data Pipeline Development, Workflow Automation, Web Scraping, Forecasting, Scenario Modelling, Predictive Modelling, Statistical Analysis.
- **Cloud & Data Engineering**: AWS, GCP, Apache Airflow, dbt, Apache Spark, Snowflake.
- **Machine Learning**: scikit-learn, TensorFlow, Time-Series Forecasting, Predictive and Scenario Modelling.
- **AI & LLM**: LLM Applications, RAG (Embeddings, Vector Search), LLM Agents and Tool Calling, LLM Evaluation, Fine-Tuning, Prompt Engineering, Claude Code, Cursor.
- **Data Visualization**: Power BI, Tableau, Sisense.
- **Product & Leadership**: Product Strategy, End-to-End Product Ownership, Roadmap Planning, User Research, Team Leadership, Stakeholder Management, Project Management, Agile/Scrum, Sprint Planning, Jira, Trello.
- **Domain**: Energy Markets, Energy Transition, Infrastructure Analytics.

EXPERIENCE

Bloomberg

Data Lead

Jun 2024 – Sep 2026

- Designed and implemented Python and SQL-based **data pipelines** supporting global energy market research and modelling, orchestrated with Apache Airflow and dbt.
- Owned the **Data Viewer and Enterprise Data API** within New Energy Outlook end-to-end, including schema design, release management, and client support, delivering datasets directly to external clients.
- **Migrated** 4 legacy Excel-based models into Python, cutting per-model runtime from ~1 week to 4-5 minutes and enabling parallel runs.
- Developed **predictive modelling pipelines** using scikit-learn and TensorFlow, supporting long-term energy scenario analysis.
- Built **LLM-based agents** for automated data collection and extraction, feeding New Energy Outlook datasets.
- Developed and maintained global datasets containing **1M+ data points** across power, transport, industry, buildings, and other energy sectors, hosted in Snowflake for scalable querying.
- Built **shipping and aviation** datasets and modelling frameworks from the ground up to support energy transition analysis.
- Supported **10+ analysts** through data products, automation workflows, and modelling infrastructure.
- Used **AI coding agents** (Claude Code, Cursor) to accelerate pipeline development and automate research.

Wood Mackenzie

Data Analyst (Data Processing Team Lead)

Nov 2023 – Jun 2024

- Led a **team of 10** and delivered 70+ recurring automated workflows annually, replacing manual reports and legacy tools.
- Owned end-to-end Wood Mackenzie's customer-facing **Power & Renewables** interactive data portal, built with Sisense, containing 100+ predictive models and used directly by clients.
- Built end-to-end **CI/CD pipelines** supporting [Wood Mackenzie Lens](#) on AWS SageMaker, leveraging Apache Spark for large-scale data processing.
- Improved data quality and coverage across hydrogen, ammonia, and methanol datasets by adding automated ArcGIS validation, previously nonexistent.

Senior Data Associate (Data Optimization Lead)

Nov 2022 – Nov 2023

- Developed demand **forecasting models** supporting global oil and gas market analysis.
- Led a team of 4+ responsible for over 50 data processes.
- Built Python and VBA automation tools that reduced manual data collection efforts.

Data Associate

Jul 2021 – Nov 2022

- As the first member of the Commodity Analytics team in India, grew the team from just me to 12-13 people by the time I left.
- Partnered with analytics and automation teams to identify and automate priority workflows.

SELECTED INDEPENDENT PROJECTS

LLM Shopping Assistant for Instagram & Facebook Shops

- Built a Claude-based assistant with tool calling that answers shopper questions in DMs from a store's live Shopify catalog.
- Added multi-language replies, GDPR double opt-in, and multi-tenant routing across stores (TypeScript, Postgres).

EV Infrastructure Intelligence

- Built Python-based pipelines to collect and standardize EV charging infrastructure data across India.
- Automated data extraction, cleaning, and validation from public data sources.

Beauty & Consumer Insights Research

- Publish data-driven analyses of beauty, fashion, and consumer brands through two independent newsletters, [The Style Scientist](#) and [TLDR Fashion](#).
- Conduct market sizing, competitive benchmarking, trend analysis, and consumer sentiment research.

EDUCATION

University of Lucknow

B.Sc., Mathematics and Statistics

2017 – 2020

CERTIFICATIONS & AWARDS

Data Analyst Career Track using Python, DataCamp

Data Visualization with Tableau Specialization, UC Davis

Google Kick Start Round A – Rank 206, Google

Silver Badge for SQL, HackerRank
